

Plants and Pathogens

What is a microbe?

They are tiny organisms...

They can be good!

They help you with digesting your food

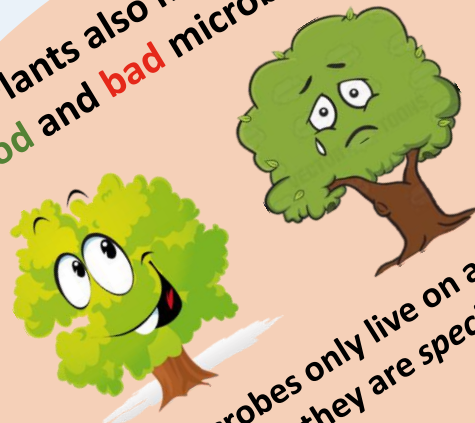

But they can also be bad...

A microbe that makes you sick is called a pathogen

Plants also have good and bad microbes

Some microbes only live on a few plant species, they are specialized

Pathogens and plants can be affected by climate change!

They are sensitive to changes in temperature and moisture

Today, we will look at the pathogens of the forest Anemone (*Vitsippa*)

Anemone has 4 different pathogens!
